

Kentucky Flood Preparedness Quick Guide

Kentucky Flooding Facts

- Flooding can occur almost anywhere. The speed and duration of flooding can vary significantly
- Kentucky experiences— flash floods, stormwater, backwater, and riverine flooding
- Saturated conditions prior to rain events may exacerbate flooding
- Flooding may cause fatalities or injuries, disrupt or destroy infrastructure (roads, bridges, culverts, water, wastewater, gas, electric), disrupt drinking water supplies, and cause erosion and landslides
- Due to a varied topography and nearly 90,000 miles of rivers and streams, flooding is Kentucky's most costly natural hazard

A floodplain is the area adjacent to streams, creeks, and rivers that provide floodwater storage

When do I need a permit?

A floodplain permit is required by the local floodplain administrator as well as the KY Division of Water (KDOW). Various other permits may be needed during the recovery process. The KDOW administers [KRS 151](#), which outlines the requirements for floodplain development.

Floodplain permits are issued by the Cabinet pursuant to 401 KAR 4:060 for any development in areas along or across a stream. Other permits, such as Water Quality Certifications through the Clean Water Act Sections 401 and 404 may also be required. [Link to more info.](#)

Check the [Kentucky Business One Stop Portal](#) for more information. The permitting process is vital to disaster recovery and required for damage reimbursements. State and federal agencies work together closely during disasters to expedite the permitting process.

Substantial Damage

The state defines Substantial Damages as *"...damage of any origin sustained by a structure whereby the cost of restoring the structure to before-damaged conditions would equal or exceed fifty (50) percent of the market value of the structure before the damage occurred."* This means that if the cost of fixing a damaged structure is 50% or more of the buildings value, then the whole building needs to be protected from future flood damages by bringing it into compliance with the floodplain regulations.

Know Your Flood Risk

- Understand the difference between weather [watches and warnings](#)
- Understand the financial and health impacts of floodwater or wastewater
- Check your flood risk on the [KDOW Flood Risk Portal](#).
- Link to flood risk and information resources
 - [USGS WaterWatch](#)
 - [USGS Flood Inundation Mapping](#) program
 - [FEMA Flood Map Service Center](#)
 - River predictions : [NWS Advanced Hydrologic Prediction Service \(AHPS\)](#) - select your local NWS office servicing your area (Paducah, Louisville, Jackson, or Wilmington, OH) to see the river predictions for that area

Mitigation Pays

- Mitigation has a 6:1 return on investment ratio; mitigation is key to recovery
- Link to Mitigation Grant Programs
 - [Hazard Mitigation Grant Program \(HMGP\)](#)
 - [Pre-Disaster Mitigation \(PDM\)](#)
 - [Flood Mitigation Assistance \(FMA\)](#)
- [Public Assistance Stafford Act Section 406 Mitigation](#) Restores damaged public facilities if cost-effective mitigation measures are applied

Increased Cost of Compliance (ICC)

ICC coverage is part of every flood insurance property and provides up to \$30,000 to help cover the cost of mitigation activities that will reduce the risk of future flood damage to a building. The building must be substantially or repetitively damaged, and ICC will help pay to bring the building into compliance with State or community floodplain management laws or ordinances and may be used to match other federal mitigation funding.

For a comprehensive overview of disaster and mitigation-related information see: <http://www.kymitigation.org/quick-links/>

KY Silver Jackets is a collaboration effort across agencies and levels of government. The KY Silver Jackets leverage resources: talent, data, funding to accomplish flood risk reduction goals.

Property Owners

Before a Flood

- Develop emergency plans (<https://www.ready.gov/make-a-plan>) and make an emergency kit (<https://www.ready.gov/build-a-kit>)
- Develop evacuation plans with primary and alternate routes
- Prepare with the Five Ps of Evacuation: People, Prescriptions, Papers, Personal Needs, Priceless Items
- Document/photograph belongings, assets, and other important information (deeds, insurance, etc.)
- Clear debris from gutters, downspouts, and drainage systems
- Become familiar with your communities' flood damage prevention ordinance so you can work with local officials to rebuild safely

During a Flood

- Monitor and share flooding impacts to social media (Facebook, Twitter) using the hashtag #kywx
- Evacuate if needed and heed advice of local and state emergency officials
- Never drive through flooded roadways – “Turn Around Don’t Drown”
 - <http://www.nws.noaa.gov/os/water/tadd/>
- Moving water has tremendous power. Six inches of moving water could knock you off your feet, and a foot of water can sweep a vehicle—even a large SUV—off of the road.
- Stay out of flood waters! Floodwaters can contain rocks, mud, other debris, oil, gasoline, and sewage. Be especially cautious at night when it is harder to recognize flood dangers
- Stay out of any building surrounded by floodwaters

After a Flood

- If your home was flooded, you may only be able to enter when officials say it is safe to do so.
- Use extreme caution when entering flooded buildings. There may be hidden damage, particularly in foundations. Check for loose boards and slippery floors.
- Personal safety considerations include protecting yourself from electric shock, mold contamination, asbestos, and lead paint.
- Turn off electricity at main breaker or fuse box.
- Do not touch electrical equipment if it is wet or you are standing in water. Not familiar your home’s electrical systems? Contact the local power company or a qualified electrician
- Use flashlights, not lanterns, torches, or matches, to examine buildings. Flammable gases may be inside the structure and open flames may cause a fire or explosion.
- Document all damage before doing any work to the structure. Create a list of damage, record model numbers, take pictures or videos, etc.
- Protect your home from further damage by opening doors and windows, covering any exterior damage, removing any mud or debris, draining the basement, and by checking for broken or leaking pipes. Your flood insurance policy may cover some of the cost of protecting your home from further damage.
- Contact local officials for guidance on damage assessments and flood insurance claims
- Ensure authorizations and permits are secured prior to rebuilding. Federal, state and local officials work together to ensure a speedy permit review process.
- Assess and implement mitigation strategies and actions for recovery

Local Officials

Before a Flood

- Use local social and news media to communicate risk & safety procedures to the public
- Make a list of areas where transportation, water or wastewater infrastructure may be flooded
- Add safety signage to routes or flood prone areas, when possible
- FEMA Public Assistance (PA) Section 406 Mitigation allows for cost effective mitigation activities to public facilities and infrastructure
- Build relationships with your community, state, regional, and federal agencies
- Coordinate emergency management activities to ensure resource knowledge and availability (Fire, Police, EMS, Hospitals, etc.)
- Understand your communities' flood damage prevention ordinance so you can work with property owners to rebuild safely and promote mitigation

During a Flood

- Monitor and share flooding impacts to social media (Facebook, Twitter) using the hashtag #kywx
- Bring together relationships with your community, state, regional, and federal agencies
- Document all action measures taken, personnel time, and in-kind service

After a Flood

- Declare an emergency. To better understand the declaration process and the county components and data needed link to <http://kyem.ky.gov/recovery/Pages/New-Declaration-Process.aspx>
- The local floodplain coordinator is part of the recovery and will conduct Substantial Damage assessments on the affected structures. Perform and document damage assessments
- Photograph damage BEFORE repairs begin
- Maintain detailed records such as volunteer efforts, injuries and deaths, sheltering/feeding activities, and transportation detours (length, duration, # of impacted citizens)
- Use KYEM damage assessment digital tool or Public Assistance Form 501
- KYEM verifies all data before submitted to FEMA for a Joint Preliminary Damage Assessment
- Examine every damaged facility site for mitigation opportunities
- Work with federal and state officials to document High Water Marks and create impact maps
- Encourage state and federal partners to assist in collecting event-related data and information
- Document outreach, mitigation, and safety successes to use in the future

Did you know?

- FEMA generally doesn't reimburse debris removal unless the debris is threatening infrastructure
- Contact NRCS for [Emergency Watershed Protection \(EWP\)](#) information
- KYTC bridge inspections may be needed to be eligible for FEMA funding
- FEMA may help stabilize landslides if there is a threat to life, health, safety, or infrastructure
- FEMA may repair landslides permanently; a geotechnical investigation may be required
